The Business Problem

- A retail superstore wants to understand:
- Which regions and products drive the most sales?
- Which products are losing money?
- Are discounts helping or hurting profit?
- Who are the most valuable customers?
- Which states generate the most revenue?

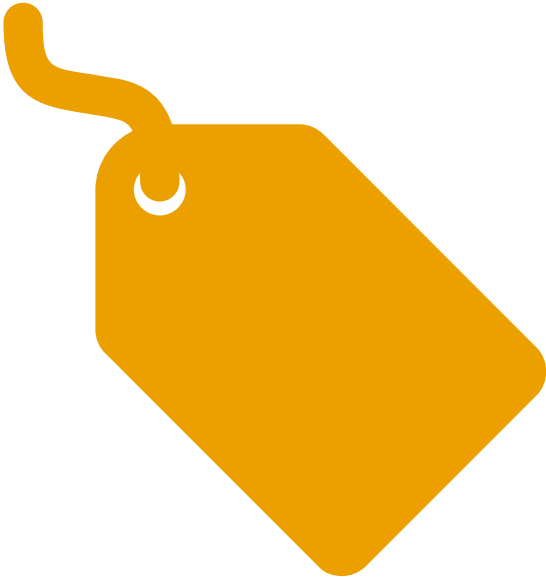

Key Findings From SQL Analysis

- - West region leads sales at \$725K — South weakest at \$391K
- - Technology most profitable category at \$145K
- - Tables & Bookcases losing money (-\$17K and -\$3.4K)
- - Top customer Tamara Chand spends \$25K
- - Discounts above 15% cause losses
- - California dominates with \$457K in sales

Built with Power BI — 2 page interactive dashboard showing sales trends, regional performance and profit analysis

Business Recommendations

-
- 1. Stop heavy discounting on Furniture
 - Discounts above 15% cause losses
 - 2. Investigate South region underperformance
 - South sales are 46% below West region
 - 3. Protect top 10 customers
 - Top customer spends 3x the average
 - 4. Review Tables & Bookcases pricing
 - Both sub-categories actively losing money
 - 5. Focus marketing on growing states
 - Business too dependent on California & New York
